ABOUT US

CONTACT

DSI Technologies is the leader in residential installation for telephone, home security, high speed internet and television, for both single and multiple dwelling units. We service all 50 states.

Home Security

DSI Technologies makes it possible for your family to have the peace of mind that only comes from top-grade security built on a solid network.

Home Infrastructure

Technology demands in the home expand every year with each new product release, from home computers to Voiceover IP telecommunications to music and media. You already expect the highest reliability from your electric, heating and sewer utilities, for your daily life and for the value of your property... you should expect the same level of service from your broadband network. If you're considering a new home or development, ask your builder about Fiber to the Home (FTTH) networks.

The Power to Expand

Regardless of what new technology comes down the road, no method of broadband service delivery is better poised than fiber to meet the challenge.

Your Entertainment

Services

DSI Technologies is an LLC corporation dedicated to customer service and quality. We provide telecommunications installation for satellite TV, high speed internet, telephone communications and home security for commercial structures. Our customers include owners of both single and multiple dwelling units, from small corporations to major conglomerates.

Our expert personnel provide the following commercial services:

- Telecommunications: voice telephone installation and wiring
- High speed data: internet installation and wiring
- Satellite TV: centralized installation and wiring
- Home security: wiring and installation for both residential & commercial

DSI Technologies can provide the best in home television, including HiDef signal service. And nothing beats a high speed internet connection for music and movies.

Your Communications

Voiceover IP telephone communication has exploded across the landscape in the US and other countries, and for good reason: it's simply better! Gone are the days of cutting phone calls short because of per-minute charges and unreliable service. And fiber is one of the most reliable technologies to deliver this essential service to your home.
